comCables forms Telecommunications Focus Group

ORLANDO, FL (January 18, 2010) – Denver-based comCables is looking for installers of data communications to share information and increase their revenues by promoting improvements in technology.

Installers are being asked to serve as members of a focus group, which will meet in conference calls four times a year. One goal of the group will be to identify how the convergence of separate Internet Protocol (IP) systems may impact technology capital expenditures in 2010.

The group will be managed and moderated by Tom McAllister, comCables' newly appointed Director of Sales, Manufacturing.

"All too often, the professional datacom installer gets trapped in a purchasing cycle forced by the manufacturer," said McAllister, a 30-year veteran of the datacom industry. "This focus group, composed of those closest to the true needs of data communications, will explore fresh ideas, new products and new marketing channels."

Focus group members will be from leading-edge telecommunications companies in the U.S. and Canada specializing in installing low-voltage systems. Interested companies attending the *BICSI* Cable Industry Conference in Orlando are encouraged to stop by the comCables Booth.

For more information about the focus group, contact Tom McAllister at 303-952-1733 or tom@comCables.com.

Information about comCables is available from Brian Zabroski at 303-952-1735 or brian@comCables.com. The company's website is www.comcables.com.

Founded in 1999, comCables is headquartered in Denver, CO, and a manufacturer of structured cabling solutions. In 2009, comCables was named the 21st Fastest Growing Inner City Company in the U.S. The company operates four (4) locations within Colorado, an eastern distribution facility in Arkansas, as well as an office in Cabo San Lucas, Baja California, Mexico.
